PROFESSIONAL SUMMARY

Mechanical Engineer with 6+ years of experience covering the full product lifecycle - from mechanical design and CAD engineering to NPI, production support, and shop-floor leadership. Advanced SolidWorks user with deep hands-on expertise in DFM/DFA, sheet metal, CNC manufacturing, GD&T, and engineering-to-production transfer. Combines design-office precision with real manufacturing experience, turning engineering requirements into manufacturable, cost-effective, and well-documented products.

CORE COMPETENCIES

SolidWorks (Advanced) · GD&T & Tolerance Analysis · DFM / DFA · Sheet Metal Design · CNC Manufacturing · Engineering-to-Production Transfer · BOM & ECO Management · Production Team Leadership

WORK EXPERIENCE

Veev Jun 2024 - Jun 2026

Mechanical CAD & Production Engineer

Israel

- Owned the mechanical CAD portfolio for ~100 assemblies (200-2,000 parts each) within a 6-person CAD team, delivering production-ready SolidWorks models, drawings, and documentation for complex construction-tech systems.
- Created and released manufacturing drawings and BOM-related data in compliance with GD&T, tolerance, and ISO-aligned drafting standards.
- Resolved buildability conflicts across structural, MEP, and architectural layers before production release, reducing late-stage rework and improving production readiness.
- Served as key interface between R&D, manufacturing, field teams, and suppliers, driving engineering-to-production transfer and CAD standards / parametric modeling methodologies across the team.

2019 - 2020

Relocation to Israel

- Relocated to Israel.

M. Lachman 2020 - 2024

Design, R&D & Production Engineer

Israel

- Designed mechanical parts, sheet metal structures, and production documentation in SolidWorks and CNCKad for defense-supply, infrastructure, and high-tech customers (incl. IEC, Bezeq, Intel-related projects).
- Took ownership of R&D-level design work and new-product introduction (NPI) end-to-end, including client-facing technical discussions, effectively covering the R&D function within the team.
- Led a 5-person production team across CNC laser cutting, punching, welding, bending, and assembly, managing 1-5 concurrent projects with on-time delivery.
- Programmed CNC laser and punching operations, selected tooling, and improved material utilization through nesting optimization - reducing scrap and material cost per project.
- Bridged engineering and shop-floor execution: resolved manufacturing issues, adjusted designs for producibility, authored operator manuals, and managed product quality control (QC).

EDUCATION

M.Sc. Mechanical Engineering Emperor Alexander I St. Petersburg State Transport University, Russia 2014

Specialization: Lifting, conveying, construction, and road-building machinery and equipment. Degree recognized by the Israeli Council for Higher Education (CHE), 2019.

CERTIFICATIONS

Web Developer, Full Stack Practicum (TripleTen) 2023

SKILLS

CAD / Design: SolidWorks (Advanced), SolidWorks PDM, AutoCAD, CNCKad, parametric modeling, large assemblies (up to 2,000 parts), sheet metal design, production drawings, GD&T, tolerance analysis

NPI / Production Engineering: Engineering-to-production transfer, DFM/DFA, ECO processes, BOM management, routing cards, work instructions, manufacturability reviews, process improvement

Manufacturing: CNC laser cutting, CNC punching, CNC machining, stamping, welding, bending, nesting optimization, jigs, fixtures, tooling, assembly & prototype build support

Quality & Documentation: QA/QC, ISO-aligned drafting standards, inspection support, clean-room production, operator manuals, manufacturing documentation

Systems & Leadership: Arena PLM, Autodesk Construction Cloud, ERP environments, AI tools; production team leadership, operator training, cross-functional coordination (R&D, manufacturing, field, suppliers)

Languages: English (Fluent), Hebrew (Fluent), Russian
